

## **Ten Points to remember about this NEO (Planet-7X)!**

1. No year is conclusive on it's arrival, there are only estimates. (except for NASA, and they are silent on the matter)
2. We have a range of years as possibilities for it arrival 2013-21, and the year before it arrival there will be a new object in the sky for all the general public to view.
3. The year 2013 and 2014 is strongly favored from the implied biblical text.
4. There is clear historical data of this NEO (Planet-7X).
  - Enters Earth's orbit path in mid-August to mid-Sep..
  - It exits Earth's orbital path in mid-March to mid-April.
  - It will have a separation of 150-152 days apart from entry to exit.
  - The debris field Earth travels through is seven times the diameter of Earth
  - New findings from Astrophysics indicating gravity from a new planetary body.
5. There is clear historical data of a magnetic pole shift.
6. There is clear historical data of a geographical pole shift.
7. There is clear historical data of drastic seasonal changes.
8. There are strong indicators of past global catastrophes (droughts, floods, weather, etc.).
9. There are strong indicators of large meteor impacts in Earth past.
10. The Bible is a integrated message, pointing to a end time event that precisely matches a NEO such as Planet-7X.
  - It says to look in the sky for signs!
  - No year is given, nor a point to count from.
  - All I can see is that we will see it prior to the 3 1/2 yr. of of "the great tribulation".
  - The Bible indicates on what to look for prior to it's arrival, strange weather, earthquakes, title waves, escalation on political uprising, rumors of wars, global economic distress, heighten threats to Israel, the topic of Israel will be a heavy burden to all nations, etc. and this is prevalent and abundant in today's news!

# ESTIMATING THE YEAR OF PLANET-7X RETURN

It's return will become apparent when Planet-7X is actually sighted in December (Hanukkah) the prior year, as a distant bright object equivalent to the appearance in size to Jupiter and as bright as Venus in the night sky.

We then have approximately 3 1/2 months before the first of two meteor storms.

Weighing all the scientific data from a biblical perspective, my greatest expectation is that Earth's looming next near-miss encounter with Planet-7X has a high probability to occur sometime in the years 2013 or 2014 in the month of Passover (mid-March to mid-April). It's my humble opinion, any date past 2016 would well exceed the Biblical time account!
