

It's DISinfo, Alex.

If I had to guess, I would guess that it's very deliberate DISinfo because it's coming from Cal Tech. . . an INSIDER institution. They have the inside straight on a great many things just like JPL or Kavli Institute out here on the west coast. Is it possible that these particular "professors" are voicing their own personal/professional opinions without benefit of the normal insider info that Cal Tech is typically privy to? OK, maybe it is remotely possible. . . but it is not very probable. If they are guessing without access to the insider info that the other insiders are privy to there at Cal Tech, then blessings on them and we would have to downgrade their disinformation story to the level of just bad information or a best bad guess. But without knowing these guys personally and KNOWING for sure what THEY know or think they know, we would not be able to classify the level of malevolence of their new story. But just coming from "professors" at Cal Tech and saying that PX is an ice planet with an orbit like other Trans Neptunian Objects smells pretty bad from the get-go.

Why?

For starters, the coldest brown dwarf star that we know of to date has an estimated surface temperature of about 80 Degrees F. . . [http://www.millenniumprophecy.com/Current\\_Events/Entries/2011/3/25\\_Coldest\\_Brown\\_Dwarf\\_Star\\_Discovered.html](http://www.millenniumprophecy.com/Current_Events/Entries/2011/3/25_Coldest_Brown_Dwarf_Star_Discovered.html) . They get much HOTTER from there. It is estimated that most of the brown dwarf stars that have been seen so far are in the range of 700 Degrees to 800 Degrees F. . . the temperature of a fairly hot oven. Brown dwarf stars are hot for a reason. They are LARGE. . . generally about Jupiter size diameters (+/- about 10%) and they have solid cores like our Sun. They get their start in life as "chips off the Old Block" when their mass is pinched off the larger main star body via the Z Pinch Effect initiating their odd orbit patterns. That star forming process is the reason why so many stars are binary systems. With heavy metals, copper, nickle also lots and lots of iron, they are HEAVY. . . similar to Jupiter. . . and hot like an oven. And because they pack a lot of iron in their composition, they bring MAJOR gravitational fields and MAJOR magnetic fields to the table for "discussion". Because they are both "hot and heavy" they would not be the methane ice composition of Saturn, Uranus, Neptune or the other TNO's. Methane ice at -285 Degrees is COLD. Iron core objects the size of Jupiter with those heavy gravitational stresses and molten cores are not in the same league as large agglomerations of methane ice. They are just not the same

at all. So the different core source materials for brown dwarf stars vs. TNO's produce VERY DIFFERENT results in the physical result that gets formed and then functions.

The other reason I think these guys are offering bogus information is the fact that the MATHEMATICS of Dr. Robert Sutton Harrington establishes rather conclusively that PX is approaching the ecliptic plane of our solar system from the SOUTHERN SIDE of the ecliptic. . . from the SOUTHERN side of the ecliptic. Harrington's math is widely known in the astronomy circles. He concluded that the odds were 5 to 1 that PX was approaching the ecliptic from the southern side and that it was coming inbound somewhere between RA 14 and RA 21. . . but most likely somewhere closer to RA 16. These Cal Tech "professors" are pointing to the opposite side of the solar system as the most likely place that PX would be located. Again. . . WRONG !!!!!!! The RA 6 (December/January) side of the solar system is the side of the solar system that PX will be going OUT on. It will be coming INbound on the other side. . . the RA 18 side.

Remember, Alex, it is the Lord Jesus who describes the brown dwarf star and gives the effects lists that will take place when it comes back. . . Revelation 6, 7, 8, and 16. . . as well as Matthew 24 and 25. It is the Lord Jesus who described the brown dwarf as "Bitterness" (or "Wormwood" if you prefer KJV). . . basically nailing the alkaline atmosphere characteristic that all brown dwarf stars seem to have. It was the Lord Jesus who said that "the powers of the heavens will be shaken". And sure enough, the RA 18 side of the solar system is where the planetary orbits have been observed to have perturbation problems. . . all the way back to the late 1700's when it was noticed that Uranus had an "off track" problem on the RA 18 side of the solar system. Alexis Bouvard measured the off track position of Uranus in 1821 and it was deflected a full degree from where it was supposed to be located based on its normal planetary track. His measurement error was about 1/10<sup>th</sup> of a Degree so a full Degree of off track error was 10X his measurement error with the instruments of his day. That's a lot of deflection. Uranus was off track when it came back around on its next orbital pass as well. That's why Robert S. Harrington could use the Uranus deflections as a guide to where PX was coming inbound from. And if Wormwood/PX/Nibiru/Marduk/Nemesis/the brown dwarf has not shown its face by the end of 2017, then Saturn will be the next planet to suffer off track deflection/perturbation. So the Lord's comments that "the powers of the heavens will be shaken" was not an idle comment. It fits a pattern of what happens when the brown dwarf comes through the solar neighborhood on its perihelion maneuver. . . something the Lord would have know about. . .

and something He told us to look for.

Always keep the Lord's comments in mind and the planetary perturbation/deflections in mind when you are evaluating the comments by "professors" or astronomers. If they have a government agenda behind their statements then they might offer bogus information for public consumption. Why? Because that's the side where their paycheck bread is buttered. . . the agenda-driven misinformation/disinformation side. The planets don't have a deception agenda. They don't care what some deceptive government "policy" is. They orbit the way they orbit based on the physical principles of celestial mechanics. They could care less what any Earthling's opinion is one way or the other. So watch what the planets DO. If government or astronomer pronouncements don't line up with the measured behavior of the planets of our solar system, then it is the government or astronomer opinion that needs revision. . . NOT the planetary behavior. The planets are the ones telling the TRUTH. They have no "agenda". And the Lord Jesus backs the planetary behavior pattern up with His descriptions of what will happen when Wormwood gets here on its next trip through town. Wormwood is going to "shake things up". In fact, it has already been doing that since the late 1700's. And from time to time we could even measure the effects. So stick with the Lord Jesus and the measured planetary truth. Don't get sucked into the agenda game.

Regards,

Gill Eriksen
