

THE LIGHT OF DAY APOLCALYPTIC NEWS BRIEFING

JULY 2013

NOCTILUCENT CLOUDS: Earth's "noctilucent daisy" is glowing brighter than ever. **Seeded by meteor smoke**, noctilucent clouds are surrounding the north pole in a luminous circle visible from ground and space alike.

2013 is shaping up to be a great year for NLCs. The clouds surprised researchers by appearing early this year, and many bright displays have already been recorded. Once confined to the Arctic, NLCs have been sighted in recent years as far south as Utah, Colorado, and Nebraska. They might spread even farther south in 2013.

"I think they're using Weapons in orbit to fire at the BIG Entourage of Asteroids, meteors, etc. coming in AHEAD of Planet-X.. These clouds are being created as a result..." [SD]

JULY 5TH

BIG SOUTHERN SUNSPOTS

Could this be an "indicator" that the inbound Planet-X is influencing that portion of our Sun [SD] ??

One of the biggest sunspot groups of Solar Cycle 24 is emerging near the sun's southeastern limb. AR1785 has a "beta-gamma-delta" magnetic field that harbors energy for powerful X-class solar flares. Another active region trailing behind it, AR1787, is only slightly less potent, with a magnetic field capable of M-class eruptions

These sunspots are a sign that the sun's southern hemisphere is waking up. For most of the current solar cycle, the northern half of the sun has dominated sunspot counts and flare production. The south has been lagging behind--until now. June brought a surge in southern sunspots, and the trend is continuing in July. This "southern awakening" could herald a double-peaked Solar Maximum due in late 2013-early 2014.

Epic rainfall devastates Toronto: More than a month's rain falls in less than 2 hours – 'like nothing we've ever seen'

<http://theextinctionprotocol.wordpress.com/2013/07/09/epic-rainfall-devastates-toronto-more-than-a-months-rain-falls-in-less-than-2-hours-like-nothing-weve-ever-seen/>

JULY 8

SPACEWEATHER.COM:

"A slow-moving CME expelled from the sun on July 6th is expected to hit Earth's magnetic field on July 10th. Minor geomagnetic storms are possible when the CME arrives"

Go to space weather's 7/06 archives & you wont find ANY "CME Event" from that day ??????

What are they hiding ???

IF there was a Flare &/or CME on July 6th, could this account for GPS disruption that is bringing down Airplanes lately ??? Like the tragedy in San Francisco with that Asiana Airlines flight ????

Remember on the Movie 'Knowing' it shows an Airliner falling out of the Sky & this is somehow associated with what the Sun is doing ????

Lots of Train Derailments lately as well... PROBABLY a result of the Earth Shifting causing "runaway trains" like this report-

<http://www.weather.com/news/oil-train-derails-1-dead-quebec-town-20130706>

Revelation 8:8 SECOND TRUMPET

8 And the second angel sounded, and as it were a great mountain burning with fire was cast into the sea: and the third part of the sea became blood;

-an event like fukishima (which is destroying the aquatic life and poisoning the water) which causes sea temperature to increase.

-there also has been an increase in underwater volcanic activity- which is causing a global temperature change of the seas and is increasing the frequency of red algae (this actually makes the waters appear as blood and kills aquatic life)

-see revelation 16:3

JULY 26

Edward Snowden: Solar-Flare 'Killshot' Cataclysm Imminent
Terral 03's comments-

The 'kill shot' threat coming from a solar flare in the month of September seems highly unlikely, because Earth will be on the backside of the Sun relative to the source and cause of solar flares at this point in the black star/Earth orbit cycles. Expect the flares to be released in the general direction of the Virgo Constellation migrating from the Leo Constellation with the string of X-class flares recently released around the middle of May 2013. While Earth has seen an escalation of these dangerous solar flares in the months of March and September for the last few years, the Earth will be spared this September with the flare activity taking place on the far side of the Sun relative to Earth position. Earth magnetosphere will develop an extra belt starting September 15, 2013 give or take a few days either way, which represents extra shielding capabilities provided through the black star/Earth magnetic portal connection drawing added electromagnetism from the Sun/black star magnetic portal connection due to cross on October 12-15, 2013. We will see one or two 7 to 8-magnitude earthquakes each week through this coming earth change uptick period running to the backside alignment, until the 3-month earth change lull period begins running through the middle of January 2014 to begin the next Earth orbit cycle relative to the black star now migrating to the left side of the Virgo Constellation. My expectation for a solar flare kill shot would be in the time between late March and early June of 2014, when Earth is passing between the Sun and black star.

The Snowden/NSA HAARP testimony below represents perhaps one tenth of the story with information concerning Washington DC Puppet Government Operations that only begins to scratch the surface. Yes. There is a Rothschild/CFR Working Group Assassination Agenda using HAARP to maintain the 1.5 hertz carrier wave around the globe, but the operation is far more sophisticated than the story suggests. Chemtrailing is used to spread nano technologies among human, animal and plant life hosts allowing silicon-based chip sets to multiply for manipulating by artificial intelligence using more than 350 sub frequencies riding the 1.5 hertz HAARP carrier wave. The nanobots working inside our bodily systems grow filaments becoming appendages for mobility and antennae for AI/ nanobot communications that include nano filament upgrades, as the CFR super soldier program doctors work to break the 5 nanometer barrier allowing AI full operational capability. Threats to the Rothschild Underground Ark City Programs are identified using real-world simulations with real-world hosts run into the future. The most common way that AI neutralizes these threats is to manipulate nanobots within the human host to create flu-like symptoms that fill the lungs with fluid, while simultaneously blocking vital heart arteries leading to heart attacks. Just ask StuNoodle, TexasJean or other members of Terral's Research Group that survived to gain some idea of how Michael Owens and my mother were murdered using this technology.

Nobody can hide from the HAARP 1.5 hertz carrier wave that moves around our planet from east to west some 7285 feet tall. Conventional Faraday cages offer no protection at all in interrupting AI/ nanobot communications and operations being much too small with insufficient power to construct a sufficient electromagnetic field. AI uses information from the futuristic simulations to reverse engineer nanobot chip set filament combinations for transforming human beings into loyal New World Order

subjects over the course of time being well aware of all the probabilities from running millions of real-world simulations. AI creates stable simulation realities using hosts that follow the rules making the same steps each day part of a regular routine. The objective is to create irregular patterns in your activities in everything from your brain functions to daily routines in order to keep yourself out of the AI stable real world simulations. Keeping your simulation host self out of the real-world AI stable simulations might require canceling radio shows and Paltalk research groups and maybe accidentally deleting your You tube account, or temporarily severing ties with friends to reconnect and then disconnect again and again, over and over in the absence of any real pattern. We must become crazy like a fox throwing curve balls over the backstop to keep AI guessing. Maintaining nut job/nutcase status utilizing a variety of ploys is helpful to keep AI guessing, which goes a long way to keep you off the AI threat assessment hit list. But of course, I am a certifiable nut job/lunatic with no clue and without enough sense to come in out of the rain, so judge for yourself. ;0)

JULY 28

Terral 03 posts an email update on the "Black Star" inbound & ready to Terraform our Planet:

“The conclusion that the evidence is pointing to a geological pole shift happening now appears incorrect, but my feeling is that we should expect that to happen later in the timeline. This information should be compared to the seismic pattern that includes Chile in Feb 2010, Japan in March of 2011, Guerrero in March of 2012 and Papua in early April of 2013 and on the backside alignment dates of Sept. 4, 2010 (Christchurch), Sept. 15, 2012 (Fiji) and Sept. 26, 2012 with the Aleutian quake event. Then include the March 12-13, 2012 magnetosphere reversal event with the Feb. 5 and 16, 2013 Interplanetary Shock Wave Events and a clear pattern should emerge pointing to the black star migrating from Leo to Virgo through this period. Then integrate the CME X-class flare activity patterns from March and September to corroborate Sun/Earth - black star/Earth magnetic portal connection crossing events and we create a clear picture of black star location in Virgo leading up to a black star/Earth crossing event in late May of 2015 where the orbit paths converge, when Earth is on the left side of Libra relative to the Sun. Subatomic particle bombardment seeing proton/electron flux numbers rise is happening when Earth is between the two stars amid the Interplanetary Shock Wave events taking place on 11-day cycles, as the black star spiraling/rotating electromagnetic arms swing above and

below Earth magnetosphere with an occasional direct hit like we witnessed on March 12-13, 2012.

Earth is protected from external bombardment of black star subatomic particles by the solar wind itself for the period that Earth is behind the Sun. We should also include the data on the migrating magnetic North Pole that is moving into Siberia along a spiraling-circular path coinciding with Earth orbit around the Sun. Methane outgassing increases through the periods that Earth is orbiting towards the black star (Jan-April) and when the black star is orbiting towards Earth (Aug-October) that also coincides with the upticks and lulls in the 2.5 to 4.0-magnitude quakes, as the black star/Earth magnetic portal connection shortens and lengthens with black star/Earth proximity. Earth is receiving massive doses of electromagnetism through the black star/Earth magnetic portal connection being transformed into heat energy through Earth metals and the induction process. The bottom of the "V" in the seismic chart took place on December 28, 2012 in winter orbit (northern hemisphere) and July 7, 2013 in summer orbit, when Earth reached outside orbit position making the 90-degree right angle with the Sun and black star. The increased solar flare activity takes place near alignments, as the magnetic portal connections converge. We should expect to see between seven and a dozen 7-8 magnitude earthquake events between July 7 and about the end of October for 2013, as the black star orbits directly towards Earth in the headlights. Earth magnetosphere will also develop an extra belt starting September 15, 2013, as the Sun/Earth and black star/Earth magnetic portal connections converge.

I believe that Backman has the skills to generate the modeling data from the related evidence to demonstrate what is happening all around us once he recognizes the pattern to connect the dots. My feeling is that he also will recognize the data stream convergence in the charts pointing to a May 20, 2015 Earth/black star crossing event that does indeed include a series of geological poles shifts, as the Sun and black star wrestle for Earth magnetic polarity control.

Regards,
Terral
