

longer be the Arctic Ocean, but someplace else, nor will the south geographic pole be over central Antarctic³³. Perhaps the new poles will be around Hawaii and in central Africa with the equator running up the west coast of South America and the east coast of North America, across Greenland, then down through central Asia and Antarctica ... or some other configuration. It depends on the exact timing of the passage with respect to the longitude facing Destroyer at Perigee. Only a true prophet or the Creator can know that. Science doesn't have the tools even if we had good orbital detail for Destroyer today.³⁴

Gravity is a force that causes acceleration. Acceleration is, by definition, a change in velocity. Newton's Law of Universal Gravitation $F = \frac{GMm}{R^2}$ and the Second Law of Motion ($F = ma$) have been inexorably accelerating Earth itself, giving us a new orbit. The amount of damage during the passage won't be known for some weeks or months after passage. The model indicates that Earth will move slightly farther from the sun, but more importantly the orbit will become more eccentric as shown in Graph 5-37.

The new perihelion point will bring us closer to the sun with an increase in radiation because of the change in geometry of approximately 2%, so the coming few months may be warmer than expected; however, the aphelion is increasing such the insolation at aphelion will be decreased to approximately 83% of the current average. Even small changes in insolation, on the order of 5%, has led to the ice ages of the past, therefore it seems safe to predict that the years following 2011 will feature growing glaciers which then merge into continent covering ice sheets. Welcome to the new ice age.

We will be bombarded again at perigee with rocks and ice as we encounter the innermost shell or ring. Blood red rain will fall. Darkness will cover the land. An almost continuous earthquake will shake the Earth as the Earth's crust slips over the mantle. When the Earth finally stops slipping and the sun finally rises, the sun will rise in the West.³⁵ I've not seen any models that can estimate how long it'll take the crust to re-engage with the mantle, but there are various competing models that can estimate how long the dust cloud remains suspended, blocking the sunlight. Estimates range from several months to a few years.

It would, perhaps, be appropriate for the arrival of the Destroyer to be time correlated with the Days of Awe; the damage from tsunami and earth changes alone would certainly make the survivors feel like they had lived through **the judgment**; and the timing (Model Time) set for the autumn of the year 2011 fits the interpretation of Daniel's visions³⁶, the astronomical hint of

³³ Ibid 5-19-02 #2

³⁴ But we can make a rough estimate of the magnitude of the movement of the equator, and therefore the poles. Spring and autumn the equator of Earth is aligned to the plane of the planets. If the Earth is phase locked and latched at the equator around Perigee, then Destroyer will drag the equator through $2\frac{1}{2}^\circ - 114^\circ$ depending on whether there is 3 days of darkness or 10 days of darkness. I would support something between 70° and 110° based on analyzing one of Haniel's visions ... Book of Haniel 9-29-03 ... which resulted in Hawaii at a pole.

³⁵ Book of Haniel 5-19-02 #2, Appendix 1

³⁶ See Appendix 4 ... The Appendix 4 derivation is the same general solution proposed by Rev. William Miller (predicted 1834) and Sir Isaac Newton (predicted 2060) but all three results are derived from different assumptions about the starting point of the calculation. Neither Rev. Miller nor Sir Isaac Newton had the benefit
