

## Part 1) HDTV: Think GOD, as Satan Captures Your Children

Dr. Shmuel Asher, the author of this book, "THE GREATER EXODUS", does not believe that Jesus, Yeshua Ha' Maschiach was sent to liberate us from death-after-death. Yet, if anyone ardently contemplates the invisible presence of the One who loves us so much as to give us hands and eyes and ears and taste and smell and touch and motion and heartbeats as we sleep . . . then that faithfully abiding GOD will also lovingly suffer death to liberate us from death-after-death.

Having said that, Dr. Asher brings us a profound warning: that we are indeed headed for death-after-death, along with our spouses, our children, and all of humankind, as we become increasingly victimized by Satan's electronic/electromagnetic "psychotronic" control over our minds, and consequently, over our souls. The rapists' goal, then, is to re-sentence us back to death-after-death. JD

From "THE GREATER EXODUS",  
Chapter 11: A Place to Hide in the Wilderness

"I read a story once about how to catch wild hogs. You bait them with food, and once they get comfortable and show up to eat consistently, you build one side of a pen. The hogs will stay away for a few days, but the easy food will bring them back again. Then you build the second side of the pen. If you keep that up until the pen is finished, and the hogs enter through the open gate to eat; all you have to do then is close the gate.

This chapter's information was taken, in part, from an Associated Press wire story written in March of 2012. I am using it, in part, here to give the more secular view as to how this all, in part, may come down upon most populations in short order. It is one thing to know and believe what the prophets have been given to tell us concerning many points of our future within this cycle. However, knowing some of the possible actions for why we will finally be driven there is also important to help us identify them, weigh one against the other, and make sense of the situations. Insidious is the word; the following is just one possibility.

Evidently, the television broadcast industry was scheduled to change over from analog to digital February 17, 2009. This switch has been delayed indefinitely for reasons that vary depending upon the source and interpretation of source information.

Regardless, we have seen the marketplace expansion of interest in "High Definition" television (HDTV), and consumers' appreciation for the new generation of television technology increase dramatically in recent years. To the majority of the TV watching public, the switch to HDTV is just another step in the process of

replacing outdated analog systems with digital technology that offers greater image and sound reproduction, compatible with modern electronic digital media players. However, better sound and a clearer picture is just the beginning. The evidence shows that HD technology can also be used to remotely\_gain\_complete\_control\_over\_the\_thoughts,\_emotions,\_and\_actions\_of\_people WHO WILL HAVE NO POWER TO RESIST. So I guess my question in this is, who will have the Power to resist, and where does it come from?
