

Johns 9-13-10 Update

John's 9/13/10 Update to Earthquake-Induced San Bruno, Cali. "Explosion"

<http://www.ktvu.com/news/24948907/detail.html>

{JD: Here's a quotation from the page linked above. It documents the exact hour and minute of the San Bruno explosion.}

"At 6:14 p.m., Stephanie Mullen, Associated Press news editor for photos based in San Francisco, was attending children's soccer practice with her two children and husband at Cresmoor High School when she saw the blast.

'First, it was a low deep roar and everybody looked up, and we all knew something big was happening,' she said. `Then there was a huge explosion with a ball of fire that went up behind the high school several thousand feet into the sky.' "

{Now, pull up the following earthquake map,}

<http://earthquake.usgs.gov/earthquakes/recenteqscanv/FaultMaps/122-38.html>

{and move the white-glove index finger cursor onto the clay colored diagonal line just west of San Francisco. The words "San Andreas fault zone" will appear. Now, move the index finger cursor onto the tiny yellow square lying south-by-southwest of San Francisco, and right on the San Andreas fault. San Bruno is just a hair due east of that yellow square, which reads: "Magnitude = 1.1 2010/09/09 18:11:12 UTC, which is

equivalent to 6:11:12 Pacific Time. So, first this earthquake occurred, and then the San Bruno explosion occurred less than three minutes later, considering the time it took for the underground shock wave to travel the fraction of a mile from its epicenter on the San Andreas fault line, due east to the San Bruno underground gas main. Bingo! There's your reason for the San Bruno explosion. Guaranteed, the federal government, which has hijacked this investigation from the rightful jurisdiction of the State of California, will never ever tell you what I just told you.
