

Johns 8-28-10 Geophysical Alert for the NorthEast_ Revised

The likelihood of millions of imminent deaths in the New York City area is unprecedentedly great right now. Ordered not to alarm the public, the U.S. Geological Survey knows that there is extraordinary ground shifting, caused by miles-deep mantle plumes. They know this because they use "torsional vortex imaging" to view images of deep earth activity. The U.S.G.S. and N.A.S.A. **definitely** know that these earth traumas are intensifying, and they know that this intensification will continue to a catastrophic climax, because they know of the intensifying gravitational and electromagnetic forces now being exerted by an incoming brown dwarf star, which N.A.S.A. knows has been gravitationally captured by the enormous gravitational pulling force of our Sun. Consequently, **right now** millions of people in the greater New York City area are in danger of death by radioactive fallout from the Indian Point Nuclear Reactor, located near an awakening earthquake fault. You and I need to present this following fact to news reporters and to anti-nuclear citizen activist groups in the greater New York/New Jersey/Connecticut area. Here is the message: **Due to these earth traumas, THE INDIAN POINT NUCLEAR REACTOR IS LIKELY TO BE FRACTURED BY AN EARTHQUAKE IN THE VERY NEAR FUTURE. THE INDIAN POINT REACTOR MUST BE SHUT DOWN NOW!** New Yorkers, New Jerseyans, Connecticuters: **Doing Nothing could be deadly!** Signs of ground restlessness are now proliferating throughout the New York metropolitan area, due to the molesting forces now being exerted, at-a-distance, by this Sun-drawn brown dwarf star, the discovery of which was heralded by a major national newspaper. See a photocopy of the actual newspaper report, from the front page of The Washington Post, in the pdf file attachment, above. ~ John DiNardo

~~ THE EARTH INSTITUTE, Columbia University, New York City

Press Release: Aug. 21, 2008

EARTHQUAKES MAY ENDANGER NEW YORK MORE THAN THOUGHT, SAYS STUDY. INDIAN POINT NUCLEAR POWER PLANT SEEN AS PARTICULAR RISK.

[Abstract]: A study by a group of prominent seismologists suggests that a pattern of subtle but active faults makes the risk of earthquakes to the New York City area substantially greater than formerly believed. Among other things, they say that the controversial Indian Point nuclear power plants, 24 miles north of the city, sit astride the previously unidentified intersection of two active seismic zones. The paper appears in the current issue of the Bulletin of the Seismological Society of America.

WATER MAIN BREAKS PLAGUE NORTHERN NEW JERSEY

CLIFTON, N.J. (AP) — Officials are trying to determine if a water main breaking in northern New Jersey has spawned a half dozen others. A century-old 51-inch main ruptured under Broad Street in Clifton on Tuesday. The break sent 40 million gallons of water into a parking lot and affected water for thousands of customers. Passaic Valley Water Commission spokeswoman Ivette Mendez says there have been six smaller breaks in Clifton and Passaic on Wednesday. {JD: Water main breaks do not spawn other water main breaks, since the initial break releases pressure on any interconnected water lines. How often does a water main break spawn another water main break? Never, I would surmise.}

**from Ramapo-Bergen Animal Refuge, Inc., <http://www.rbari.org/>
On Monday afternoon, August 16, a water main behind our building burst. This dumped 8 inches of water and sewage into our first floor, our dogkennel area. We needed to move fast to get our dogs out of the building. Because all electricity to the building was cut off, we also had to evacuate all of the cats and kittens in our second floor cattery. Then on Tuesday, after our cleanup was underway, the main broke again. Here's how one of our Staff members described it:
"For years the Ramapo Bergen Animal Refuge has been our workplace, our life, our heart and our home away from home, but more importantly it has been the temporary home and sanctuary to hundreds of starved, abandoned, abused, neglected and simply just forgotten animals. Today as we walked through the empty kennel and water drenched halls, it broke our hearts to see our shelter, our refuge and sanctuary to so many animals that so desperately need us, in a shambles, devoid of any life. "**

WATER MAIN BREAK IN UNION SQUARE

Union Square (WABC-TV) -- Repair crews worked Saturday to fix a watermain break that has been disrupting traffic in Union Square. The 12-inch main ruptured shortly after noon on Saturday, undermining the street and leaving a number of commercial and residential customers without water. It happened on East 15th Street between Union Square East and 3rd Avenue..
