

Planet Earth is in trouble!

The past decade's stark history of unprecedentedly extreme geological and meteorological events shouts in our faces:

"HELLO, EVERYONE! PLANET EARTH IS IN TROUBLE!

THEREFORE, THE HUMAN RACE IS IN TROUBLE!

Those who do not want to rock the boat, nor make waves may \*die\* from these natural disasters which are now crescendoing up to a repeat of the tilting of Planet Earth that occurred thirty-six and-a-half centuries ago, as indicated by ancient tree ring analysis, with globally narrowed tree rings coinciding with the occurrence of the caldera explosion having the greatest volcanic explosivity index (V.E.I.) in all of known history: namely, the great Santorini Volcano explosion in the Aegean Sea (circa 1,640 B.C.), which wiped out the advanced Minoan civilization.

That period's records from various widely separated civilizations, contemporary to the Minoans, reveals that these civilizations all suffered a host of extraordinarily severe natural cataclysms.

This is basic physics, folks. As an example, when a meteor is plunging to the Earth, that meteor does NOT turn around and go back up into the sky. Likewise, when a dwarf star, a baby sun, not orbiting the Sun, begins to be sucked into our Sun's great gravitational force field, that dwarf star does not turn around and go back out of our Solar System . . . it continues to soar toward our Sun until it loops around the Sun, and is then slingshot back out of the Solar System, as has occurred around 1,650 B.C., when an ancient intrusion of this very same dwarf star gravitationally wrenched and tilted Planet Earth amidst a myriad of global cataclysms.

This was chronicled in The Holy Bible as "God's Ten Plagues upon Egypt," which precipitated the great EXODUS of the Israelites from slavery (The Book of EXODUS, Chapters 9 through 13).

My chief point is that, since there was a massive menacing object moving into our Solar System when Prof. McCanney made this video, then that object has not magically defied gravity to retreat from its solar attracter; rather, that massive menacing object continues to be gravitationally pulled in by our supremely massive Sun.

That intruding Sun-sucked dwarf star will fly past Earth on its way to its loop-around rendezvous with our Sun. And its passing gravity-grab will wrench and tilt Planet Earth once again.

John DiNardo

Prof. JAMES McCANNEY:

"THERE IS AN UNDERCURRENT OF NEW INFORMATION COMING FROM US, AND COMING FROM THE STANDARD ASTRONOMICAL COMMUNITY WHICH SUGGESTS THERE IS AN OBJECT RIGHT NOW MOVING INTO OUR SOLAR SYSTEM, AND THAT INFORMATION IS BEING KEPT FROM THE PUBLIC.

. . . . I'VE WATCHED COMETS COMING IN FROM THE SOUTHERN REGION OF THE SOLAR SYSTEM, AND THE INDICATION IS, FROM ALL THAT WE'RE SEEING, IS THAT THERE IS A BIG OBJECT MOVING INTO THE SOLAR SYSTEM FROM THE SOUTH [of our Solar System's Ecliptic plane ~JD].

THE POINT IS THAT WE KNOW FOR A FACT -- FROM OBSERVING OTHER INCIDENTS -- THAT THE ASTRONOMY COMMUNITY IS NOT GOING TO TELL YOU ABOUT AN IMPENDING DISASTER. IN FACT, THEY'RE UNDER DIRECT ORDERS NOT TO TELL YOU."
