Subject: Prof. McCanney's Planet X Warnings Now Unfolding

The World is seeing virtually every pre-Planet X disaster that Prof. McCanney foretold here, at least ten years ago, now coming to pass. This book is brief, but its content is great and vital to the near future welfare of humankind. Available at [jmccanneyscience.com](http://jmccanneyscience.com).

21

Cyclones will come in large groups and decimate cities and towns, leaving those with standard housing with nothing. Torrential rains will weaken roadbeds and mudslides will be common. Rivers will flood and mobility will come to a standstill. Since the jet streams will also become erratic due to extended cloud cover, some days will be very hot while on the next day it will snow in even the tropical locations. Animals in the fields will die of starvation and the quality of water will quickly be undrinkable even though there is water everywhere. Those who have not made it to high ground by this time will have lost the opportunity and will be unable to move.

Chemicals other than water such as ammonia, hydrocarbons and other complex oils may start to influx from outer space as Earth becomes more electrically active and reacts to the increase in solar electrical activity caused by the approach of the large comet and its nucleus (Planet X). By this time the public will be fully aware of the severe nature of the situation and the government leaders will have retreated into their specially prepared cave dwellings with the doors securely locked and guarded against entry by the angry populous. The Public will also be aware that it is the huge encroaching comet that is the cause of all the Earth Changes they are seeing and will all at this time become fully aware of the total incompetence of NASA who had told them that comets were harmless little "dirty snowballs" and to not listen to those who would tell you otherwise. The NASA scientists too by this time would be securely locked in their previously prepared cave shelters, stocked with provisions for a many year stay.

The winds and powerful land hurricanes will begin sweeping out large volumes of vegetation and piling into regions where eventually it will turn into coal hundreds of thousands of years later.

The public will now also begin to see large electrical discharges streaming between the planets and their moons and between the planets. Jupiter especially, with its large electrical interaction with the Sun will seem to be throwing lightening bolts across the sky. The huge comet will likewise begin to discharge electrically to the other planets and a huge trumpet like call will ring through Earth's atmosphere as the searing electrical discharges interact with the upper atmosphere. Colorful auroras will light up even the daytime sky with finger like dancing lights as the electrical discharges continually interact with the ionosphere."
