

Citizens: Unite Against Nationwide LEUKEMIA from Nuclear Plant Meltdowns! It's either SHUT DOWN or MELT DOWN! Earthquakes will continue to increase in both frequency and magnitude, due to increasing cometary incursions into our Solar System, the electrical excitations from which are already triggering phenomenal solar ejections. My writings and those of others prove that solar hyperactivity provokes earthquakes, because the Sun's electrical emissions couple electromagnetic distortions into Earth's core-connected magnetosphere, which, in turn, jolts Planet Earth in its regular daily rotation, with consequent clashing and smashing of Earth's floating crustal tectonic plates.

It should be obvious to all that such external parasitic magnetic distortions translate into commensurate tangible forces impinging upon Earth's magnetosphere and into Earth's core. These disconcerted forces jolt and jar Earth from its smooth daily rotational motion.

Therefore, we can expect nuclear reactors (many of which lie in earthquake danger zones) to go into Fukushima-style meltdowns when these forthcoming major earthquakes strike.

John DiNardo
