

Photos of Mars Glowing in Comet-Like Plasma
by John Dinardo 10-08-13

Thanks to Sheldon Day for sending this link.

Oct. 3rd: An amateur astronomer photographed Mars, glowing in an electric coma of plasma, apparently absorbed from its electrical flirtation with the highly plasmatic, Sun-drawn Comet ISON.

As I have stated a week ago, this government shutdown conveniently shuts down our eyes in the sky, our tax-paid government telescopes, so that the public will not become alarmed over Comet ISON's approaching perils. JD

Prof. James McCanney announces that has been informed that Mars has recently become engulfed in a comet-like plasma coma, obviously absorbed from the passing, dangerous, government-concealed Comet ISON.
