

Why Gulf of Mexico Land Masses Must Arise

These are some quotes from the you tube video, linked at the very end of this dissertation, which support my theory, reposted here, that there is an upward bursting pressure beneath the seabed of the Gulf of Mexico which is forcing up rich deposits of methane (lately being tapped for profit) which are increasingly likely to belch up to the surface over vast areas of the Gulf, resulting in a spark- or lightning-triggered gas explosion and its resultant tsunami which, with scientific certainty, would inundate the coasts of South and Central America, Mexico, Texas to Florida, and all the Caribbean island nations. These are some selected quotations from the video:

"They're drilling for natural gas all over North America."

"The Hopi Indians knew that there is a vast [natural gas] snake system underneath the crust of the United States."

"I found out that the Earth's crust -- in the vicinity of the [infamous leaking] Macondo oil well, in the Gulf of Mexico -- is only four to seven miles thick, the thinnest crustal area on Planet Earth."

"That gas is bursting through the surface of the ground, and it's happening all over North America, but it doesn't get any media coverage."

"Only here [around the region encompassing Colorado] is the most stable area of the North American crust, and that is where the so-called N.B.O. have built their new facility, and they are moving everything there, plus they have built all their D.U.M.B.s [deep underground military bases] there, because they know that this area will be the least affected when all this comes down."

Subject: Why Gulf of Mexico Land Masses Must Arise

Please stay with me on this scientific analysis of the mechanism which will cause land masses to arise out of the seabed of the Gulf of Mexico.

My theory concludes:

Land masses will arise out of the Gulf of Mexico.

That claim was related to me at least four years before we ever knew of any Gulf of Mexico oil spill. It was an early warning from Mark, an acquaintance who received this information from his friend, a geologist with the United States Geological Survey (USGS). The resultant methane gas bursts and tsunamis will annihilate many millions of unsuspecting residents within miles of the coast, all the way around the coastal ring: South and Central America, Mexico to Florida, and all the Caribbean island nations.

I hope to inspire you to relay this analysis to concerned people everywhere. You must spend just a bit of your scarce time to study this analysis and pass it on, in order to spark public action movements to save lives -- for these seabed upheavals can occur at any time. John DiNardo

[Note: Since I posted this report 2 1/2 years ago, the Weather Channel is now echoing my very same warning in one of their documentaries, which I hope to post on you tube very soon.]

~~ Why Gulf of Mexico Land Masses Must Arise ~~

Gulf of Mexico effluents display a mysterious white substance, yellow sulphur, and red iron, probably from the Earth's molten iron "outer core," plus other substances from the "lower mantle," which is right above the outer core. At the core/mantle boundary (CMB), large avalanches of the quasi-solid mantle edge of the CMB break off, due to heating, by electromagnetic induction, of both the molten iron outer core and the solid iron inner core, the latter being Earth's innermost mass, residing at the center of the Earth. The heating of the outer core is also intensified by the long period cyclical buildup of thermally insulative mantle magma, solidifying along the edge of the lower mantle, bounding the upper edge of the outer core, this margin being the CMB. Hence, this solidifying magma margin acts as a thickening insulative blanket, further heating the molten iron outer core. However, it is important to realize that most of the heating of the outer core is now being generated by the well known phenomenon of "electromagnetic induction," now generated by plasma-saturated comets which have been observed by scientists over the past five to ten years.

So now, Earth's CMB has these prolific avalanches of loosened magma, sloughing off from the lower mantle margin into the molten iron outer core, and the obvious effect is that this mantle erosion proceeds like a drill bit, boring tunnels up through the very thick viscous mantle, all the way up until the tunnel eventually reaches a blockage presented by the lithosphere, which is the rigid crust of Earth's surface, overlaying the less rigid uppermost mantle margin.

Understandably, molten iron from the outer core, plus newly molten magma encircling this hot newly drilled tunnel, flows like a slow oozing fountain, all the way up to the blockage at the lithospheric crust, and eventually the super heated liquefied column of magma rock and iron mixture melts the solid lithospheric crust like a gushing hot spring would melt a surface layer of ice.

This rising hot fountain is called a "mantle plume," or "thermal plume," one of which also exists at the eastern tip of Indonesia, showing that mantle plumes are prevalent worldwide. A mantle plume is similar to the lava plume that you see within a common household lava lamp, wherein an electric heating element at the base of the lamp heats up a puddle of lava, causing the puddle to rise up toward the surface as a plume of lava.

When this iron/magma column rises as a mantle plume, from the outer core/lower mantle boundary (CMB) to the uppermost edge of the upper mantle, the plume is initially blocked by the thin crustal layer, the "lithosphere," at the Gulf of Mexico seabed. Eventually, the molten mantle plume dissolves or liquefies the thin lithospheric crust, effectively punching volcanically up through the seabed. I see it as likely that British Petroleum deliberately drilled into such a spawning

pimple, a fetal volcano, in order to deliberately create this oil leak. Why would it be deliberate? Well (pun intended), I had mentioned earlier that years before the infamous Gulf oil spill, a U.S. Geological Survey geologist relayed to my friend Mark that they expect land masses to arise out of the Gulf of Mexico. It is my theory that the reason why they leaked this incipient undersea volcano was to mislead the public into accepting the coming seabed oil and gas bursts as being *man-made* rather than actually a coming series of natural outbursts of oil and methane gas from the Gulf of Mexico.

You see, the ruling elite, who are rapidly usurping and consolidating the authoritative power of democracies and republics, now fear that these coming Gulf of Mexico outbursts will so shock the public that the people will understandably go into individualistic survival mode, thus freeing themselves from their fearful obedience to the ruling elite. Consequently, many will not pay their taxes because they will know that the government's intimidating enforcement power will stagger and collapse in the face of these awesome natural disasters.

Such forecasting might seem outlandish to the unaware public, but it makes great sense to the men who have always feared that the people would pull back the curtain from their Wizard of Oz ruling in secrecy, and would unveil a gang of dirty old men atop the great political machinery that rules over and rolls over the masses.

Let us examine some of the evidence indicating that this infamous BP oil spill and the resultant blanket of corexit that so conveniently masks the entire Gulf of Mexico sea floor was a calculated event to keep the public fearful and obedient to the illegitimate ruling elite who now usurp the authority of democracies and republics around the World.

We see evidence that British Petroleum (a major component of the British Crown's and the ruling elite's global empire) deliberately blanketed the Gulf with corexit, not to absorb the oil spill, but to mask the growing web of fissures and breaks throughout the Gulf's sea floor.

This accusation of corexit camouflaging was reported by Keith Olbermann of MSNBC-TV, citing said accusation made by an expert before Congress, of which I had recently posted the you tube link.

There exists further evidence that the BP oil spill was created to keep the people fearful of man's rule, rather than of the forces of God, such as earthquakes, volcanic eruptions, tsunamis, and the like; namely, Matthew Simmons -- a key oil industry executive and a member of the ruling elite's Council on Foreign Relations -- was murdered just a couple of days after he went on MSNBC-TV and said the forbidden. Simmons exposed the deliberate BP oil spill in an interview with host Dylan Ratigan, author of GREEDY BASTARDS. What the highly placed, highly credible Matthew Simmons said that got him killed was that that silly little leaking oil plume that was being showcased every night for weeks on TV, and which Ratigan was displaying during Simmons's commentary, showed a little fish swimming right through the plume, thus clearly revealing that misrepresenting such a minute oil leak not much wider than a small fish as a major oil spill was like misrepresenting a faucet drip as

Niagra Falls. That's my analogy, but Simmons's comment paralleled it. Furthermore, Matthew Simmons went on to say that the real oil leak was of major proportions and was gushing miles away from that fake oil leak foisted upon the TV-viewing, taxpaying masses. So, the the ruling Wizards of Oz had tricked the people into seeing this beginning in a coming series of natural disasters as being man-made, and not of earth-shattering (pun intended) proportions.

But how long can the illusion last? Until the natural disasters go from the beginning stage of a microwave corn-popping cacophony to its rapid fire crescendo. That's how long the man-made, "HAARP-made" illusion will last. At that eventual point, shock realization will awaken the peoples of the World to the existing evidence (if they are not afraid to examine it) that this Gulf of Mexico oil/methane disaster is just one of many types of natural disasters which are now about to break out in a quickening drum beat.

Because they desperately want to remain the ruling elite, the ruling elite want you to think that BP caused this oil gusher with just a puny seven-inch drill pipe. How gullible do they think we are? The ruling elite would rather have you believe that man caused this disaster, because when the people find out that they are in a game of natural disaster dodgeball, they will break free from their psychological matrix cage of obedience to the tyrannical illegitimate impostaers raping them from the power stage of central government.

These ruling elite are afraid that we may no longer be forcibly obedient to them, and that we may not pay our taxes, because, when the masses realize that these are natural disasters, and NOT just one BP-caused disaster, the people's fear will then transfer to a greater master than the ruling elite; the people will then fear the Master in the heavens, because God's sun is the source of the electromagnetic heating of Earth's core. However, the sun is being driven into electromagnetic hyperactivity by plasma engulfed comets, captured and sucked into our Solar System by the immense gravitational pull of our incredibly massive Sun.

It is strikingly (pun intended) obvious: the apple fell down from the tree, and hit Sir Isaac Newton on the head due to the mutual gravitational pull between neighboring bodies, a force which exists universally between all groups of bodies, even between dust particles.

Obviously then, comets are being drawn in from deep space by the tremendous pulling force of gravity between these comets and our Sun.

Getting back to the subject of Gulf of Mexico land masses arising, the consequences of a mantle plume punching through the lithosphere, at the Gulf of Mexico seabed and elsewhere, are two-fold:

- 1) undersea volcanoes erupt, and indeed, oceanographers and volcanologists are now expressing alarm over the drastic increase in undersea volcanic eruptions, all over the World;
- 2) seabeds begin to bulge upward, due to the profusion of gases, such as methane, into newly formed pockets where the uppermost mantle margin meets the lithospheric crust, both at surfaces of seabeds and

at crustal surfaces of land areas. There are now many reports of methane gas coming out of the ground, in Texas, in Colorado, in Pennsylvania, etc. There is a recent report of methane gas shooting out of a home water faucet, being fed from a private well.

These newly formed pockets of rising gases strikingly explain the recent avalanche of reports of seabeds bulging all over the World, as indicated by drastically diminishing footage readings transmitted by ocean buoys, worldwide.

Notice, that the powers-that-be will never tell you what the day-by-day buoy depth readings are in the Gulf of Mexico. Notice, that Keith Olbermann of MSNBC-TV reported that the Corexit was promptly laid down to mask the depths of the entire Gulf of Mexico. If we were permitted to view that seabed, we would notice bulging and major fissures, from the Texas coast to the Florida coast. Notice that methane gas has been reported to be rising to the surface of the Gulf of Mexico. This is an ominous sign, since any spark from a boat's ignition or from a frequent lightning strike will cause the greatest surface fire cloud explosion ever witnessed, followed by a catastrophic coast-gobbling tsunami, if the concentration of methane gas builds to high enough levels. Such a catastrophic sea surface methane explosion has already occurred in 1998, and has been reported by Steve Quayle on his web site, stevequayle.com.

The ruling elite have been as suppressive of the science community as of the mass news media. Hence, the people of the World will remain unaware until mega-disasters send them suddenly reeling in fearful panic. You and I, therefore, have a humanitarian responsibility to disseminate this analysis and to urge others to examine it, and to promote a growing public study of this and so many other alarming meteorological and geological events, which have transpired, from the unusual to the commonplace, over the past decade.

In a forthcoming message, I will email you a photocopy of the actual New York Times newspaper report, from the U.S. National Aeronautics and Space Administration, stating that the reason why they launched the Infrared Astronomical Satellite was to detect the infrared light emitted from this approaching brown dwarf star, which NASA calls "Planet X," our new celestial dodge ball (of a mass estimated to be at least 1,000 Earth masses). NASA's "Planet X" is now in our Solar System, and has been increasingly disturbing Earth, both electromagnetically and gravitationally. Among its disturbances are Iceland's volcanic eruptions, China's, Chile's, Haiti's, New Zealand's, Iran's, etc. earthquakes; Joplin's, Tuscaloosa's, Moore's, etc. super tornadoes; softball size hail storms in various parts of the U.S. and abroad; *epic* flooding in too many U.S. states and abroad to enumerate here; a new type of super hurricane enveloping vast regions, larger than ever before in recorded history; and on and on and on.

John DiNardo

In my dissertation, above, I had stated that,
"Most of the heating of Earth's core is now being generated by the well known phenomenon of 'electromagnetic induction,' caused by plasma-saturated comets which have been observed by scientists over the past five to ten years."

One minor change:
"Most of the heating of Earth's core is now being generated by the well known phenomenon of 'electromagnetic induction,' caused by "

solar hyperactivity throughout the past decade or so. Solar emissions consist largely of electrically charged particles (protons and electrons). In their electromotive impact upon Earth's magnetic field, these electric solar particles generate electromagnetic fields which couple into Earth's own magnet field; and since Earth's magnet field originates in Earth's core, the energy from these electrical solar blasts is thus imparted to Earth's solid and molten core by the well known phenomenon of "electromagnetic induction," the same phenomenon that occurs within the many millions of electrical transformers, both small and large, that are used throughout the world. If you look up at some of the telephone poles in your area, you will find some which have these large garbage can-like objects mounted high up. Those transformer drums are filled with oil which absorbs and dissipates much of the great amount of heat generated as a byproduct of the electromagnetic energy transfer that occurs across a narrow air gap from a primary transformer coil of wire to a secondary (isolated) coil of wire.

Here then, is a real-world example that proves that when electromagnetic energy is transferred from hyperactive solar winds impacting Earth's magnetosphere, that imparted energy is indeed transferred to the source of the magnetosphere, which is Earth's solid inner and molten outer cores. This ongoing phenomenon is the gravest threat to our lives, because, for the past decade or so, solar hyperactivity has not only been heating the surface of Earth, but now we can understand that solar emissions also heat up the molten and solid metal core of Earth.

The result of this chronic long term heating of Earth's core is "mantle plumes," sometimes called "thermal plumes," that arise from the core through the mantle to the lithospheric crustal surface. And these crust-impinging thermal plumes are causing sinkholes on land, and the buckling and fissuring of seafloors, worldwide.
