

## What's Ailing America?

### NEVER ENDING DISTRACTION FROM ONGOING GENOCIDE & TREASON

Rebecca Carley, MD

[www.reversingvaccineinduceddiseases.com](http://www.reversingvaccineinduceddiseases.com)

---

In last week's newsletter, I asked readers who appreciate the time and effort I spend to write these newsletters to contact me if they want me to continue speaking the brutally honest truth. I thank all of you who responded that I am NOT wasting my time; that you are sharing the information with others who are standing up against the psychopaths in your own ways. So here we go again...

When you know how the psychopaths work, it is easy to see how we are constantly distracted from what is really important. Hollywood is used on a regular basis, but the "red carpet" distraction has been on steroids lately with all the movie and music awards. Most people (not me) had yesterday off to celebrate Martin Luther King day, where we were once again inundated with various TV specials about MLK...my favorite was the one starring traitor to the people "Rev" Al Sharpton at his "national action network". This publicity hog never discusses anything that matters, even though he knows what is going on. When I lived in NY I did a talk at his place about vaccine induced diseases...he was too scared to even come in the room. He sat outside at a reception desk, apparently to give himself plausible deniability about the information presented. But the most amusing recent distraction was the George Washington Bridge traffic scandal involving NJ Governor Chris Christie, which has been on the news for days and has now escalated to include the alleged withholding of funds for superstorm Sandy damage from Hoboken due to that city's mayor not doing as she was told by Gov Christie. This is how corrupt politicians work...so one has to wonder what did Governor Christie do to piss off the psychopaths pulling the puppet strings that this is coming out now? Or did they need another distraction from things that are really important...such as the poisoning of water in West Virginia?

Check out the article published in the Charlotte Observer titled "Chemical Spill tests Lawmakers" posted at <http://www.charlotteobserver.com/2014/01/20/4625582/chemical-spill-tests-lawmakers.html#.Ut6-BftOmt8>. This is VERY important...as it reveals not only how the agencies that are supposed to protect us from poisons do not, but how the traitor politicians sell us out. Because the info in this article is so important, I am pasting it below...

***"There are more than 80,000 chemicals in the United States cataloged by government regulators, and the health risks of most of them are unknown.*** This became glaringly obvious when, on Jan. 9, a clear, licorice-smelling chemical leaked from an old storage tank into the Elk River in West Virginia, contaminating the drinking water for a big chunk of the state, including the capital, Charleston.

What made the spill alarming was not only the reports of rashes, stomach aches and other ailments, but also the paucity of solid information about the potential toxicity of Crude MCHM, which is primarily composed of a chemical named 4-methylcyclohexane methanol.

***The 15-page Material Safety Data Sheet for the chemical, which is manufactured by the Tennessee-based Eastman Chemical Co., uses the phrase "No data available" 152 times.***

For example:

Repeated dose toxicity: “No data available.”

Carcinogenicity: “No data available.” [SAME THING STATED FOR ALL VACCINES]

Reproductive toxicity: “No data available.” [SAME THING STATED FOR ALL VACCINES]

Specific target organ toxicity, repeated exposure: “No data available.”

So sketchy is the public health system’s understanding of the chemical’s toxicity that officials wound up backtracking on whether it was safe for everyone to start drinking the water again after the do-not-use order was lifted last week.

At first, the Centers for Disease Control and Prevention said the water would be safe if it had less than 1 part per million of Crude MCHM. But then on Wednesday, the state Department of Health and Human Resources, after consulting with the CDC, said pregnant women shouldn’t drink the water until officials declare it free of any trace of the chemical.

“There are extraordinary gaps in knowledge,” said Daniel Horowitz, head of the U.S. Chemical Safety Board, an independent agency that investigates industrial accidents. Of the West Virginia case, he said, “There are so many chemicals around, and in most cases the toxicology is not complete.”

**Chemicals in the United States are generally treated as innocent until proven guilty. A company does not have to prove that a chemical poses no health hazard in order to introduce it into the commercial market.** Maranda Demuth, a spokeswoman for Eastman Chemical, said the company “goes to great lengths to ensure our commercial products and facilities meet or exceed regulatory standards.”

She said that, although U.S. law did not require Eastman to test Crude MCHM, the company voluntarily conducted 18 toxicity tests on the product and its major component. She played down the significance of the “No data available” entries, noting that nine of 152 such entries refer to water, which is harmless. She said the company abides by the European Union’s strict requirements for toxicity disclosure, and that, **had the company followed the U.S. standard, it wouldn’t have included the “no data” entries at all.**

It has been **38 years** since Congress passed a major piece of legislation regulating toxic chemicals. No one on any side of the debate over chemicals disputes that the Toxic Substances Control Act (TSCA – usually referred to as “Tosca”) is outdated and needs an upgrade.

**Two senators, the late Frank Lautenberg, D-N.J., and David Vitter, R-La., introduced an industry-friendly bill last year called the Chemical Safety Improvement Act.** Lautenberg died just days later. The bill is mired in a Senate committee; on the other end of the Capitol, a House subcommittee has held hearings on chemical safety and is crafting a bill similar to the Senate’s.

The Senate bill is opposed by Safer Chemicals, Healthy Families, a coalition of environmental, labor and public health organizations. What happened in West Virginia is a scandal, said

coalition director Andy Igrejas, and “the second scandal is that **the reform that’s on the table now would do almost nothing to change that situation.**”

**The new act would separate chemicals into two categories, high and low priority, and the Environmental Protection Agency would be allowed to conduct tests on ONLY the high-priority chemicals. States would have to follow the federal lead – a one-size-fits-all approach that the industry favors.**

But the chemicals are categorized according to the hazards they pose if used properly, for their intended industrial purpose. As Demuth, the spokeswoman for Eastman Chemical, noted, “Eastman tested the mixture Crude MCHM for its intended use as an industrial chemical in a controlled industrial environment using a variety of toxicity tests.”

**Crude MCHM would probably be considered a LOW-priority chemical by the EPA, said Rep. Henry Waxman, D-Calif., ranking member on the House Energy and Commerce Committee. The EPA would then be prohibited from subjecting the chemical to further tests, he said.**

“That is a recipe for new regulatory and knowledge gaps that could prove just as harmful as the ones we’re facing in West Virginia,” Waxman said. But Charlotte Baker, spokeswoman for the House Energy and Commerce Committee, said the two-tiered approach is sensible: “Of the thousands of chemicals out there, we need to focus on the ones that present the most risk.” Chemical safety is not a West Virginia problem, it’s a national problem, said Devra Davis, a founding member of the U.S. Chemical Safety Board and now president of an organization called Environmental Health Trust. “It would be farcical were it not so grave. This is a huge threat,” she said. “In a sense, we all live downstream now.”

THIS INFORMATION IS SO IMPORTANT, PEOPLE! The fact that “**Chemicals in the United States are generally treated as innocent until proven guilty. A company does not have to prove that a chemical poses no health hazard in order to introduce it into the commercial market**” is a key reason why we are all being poisoned! The factory that released this poison into the water in WV had not been inspected in 20 years. And we have seen many times before how it works...when cancer rates increase dramatically in the area of the spill, they will say they “can’t be sure” what the cause is. In fact, we are exposed to so many poisons due to the treachery of these federal agencies and the congressional traitors passing laws to keep the continuation of the poisoning, there is no way to know exactly what part all of these factors play in causing dis-ease. The insanity of “looking for the cure” while allowing the cause to continue is beyond the pale.

And if the above information is not enough to move you to DO SOMETHING about what is going on, I will close with 2 more examples of how the psycho cops are killing and maiming:

Proof that cops have a license to murder: <http://www.infowars.com/kelly-thomas-verdict-cops-now-have-license-to-murder> ““This is carte blanche to police officers to do whatever they want,” said Ron Thomas, the victim’s father and a **retired Sheriff’s Deputy.**”

<http://www.dailymail.co.uk/news/article-2541780/Boy-16-suffers-ruptured-testicle-police-pat-infertile.html#ixzz2qtN3mfns>

I will leave it there for this week...much more to follow. Please spread the word....

If you need help in reversing your disease with natural therapies. please go to <http://www.reversingvaccineinduceddiseases.com/services> to learn how Dr. Carley does consults. You can access many archives of internet shows Dr. Carley has done over the last few years at <http://thelightofdayradioshow.com/archives/RBN-BACKUP/commercialFree.html> . as well as prior newsletters which are posted at <http://thelightofdayradioshow.com/archives/RBN-BACKUP/Carley-Newsletters.html>
