

## DIE abetes

So...the gubment has a way of CAUSING diabetes with a drug. See first url below.

They know that Vitamin C can reduce the peripheral neuropathies. A friend gave me Prevention Healing With Vitamins, 1996, told me to read it and give him a report on it. With friends like that – who needs libraries? It painted a clear picture that Vitamin C was known back then to interfere with sorbitol formation in the human body. What I pieced together is that sorbitol is a non-metabolizable sugar that is formed instead of the normal saccharides in the body then is trapped in the cells because it cannot be metabolized. This build up of Sorbitol is the reason why diabetics go blind, have vascular disease, kidney failure and neuropathies. I was told that no one in these modern times ever dies from diabetes – they die from the COMPLICATIONS!

It is said (who are you going to beLIEve) that Sorbitol taken by mouth cannot be metabolized so it will only give you a sweet taste, pass through the gut, and not be transported inside your cells so it can't hurt you. (Read to the end of this paper if you beLIEve that). Since it passes through the gut the myth is that if you eat too much sorbitol it will give you loose stools. So, it is OK to put Sorbitol in foods for diabetics who we know were made via the Pertussis toxin in DPT shots and other Vaccine Induced Diseases. It is OK for obese people to eat Sorbitol because we already know that their insatiable hunger is from brain and hormone damage from Vaccine Induced Diseases and NOT a lack of willpower. After all, 500 lb. people are literally starving to death while eating diet food. It is always OK to put something unnatural in our bodies to trick it into thinking that it is something else because the something else would be bad for us.

Whatever...

I'm all about the: Sorbitol builds up in the cells – business.

So, after I learned this around the year 2000 I asked a nurse in a hospital why they don't just recommend 500 milligrams of vitamin C to all diabetes patients if they are not in kidney failure?

She was very non-chalant when she answered:

“THE SALES OF PERIPHERALS FOR DIABETES IS IN THE **BILLIONS OF DOLLARS.**”

Now, you know that I am kinda slow. So I had to ask her just what a peripheral was. She said that it was the testing supplies and things not related directly to the insulin drug sales. Now, there is the added benefit that when you have foreign Insulin injected into you (yes, for those of you who wish to remain Kosher, you had better look at the label on your Insulin to make sure that the source is not Porcine – that's fancy latin-medico talk for PIG) then it can easily be targeted as an antigen in the same way as if you were being vaccinated with squalene as an adjuvant. Of course, we live in modern times and it may

be that there is a cloned version of human insulin, but then we get back to the question of whether the human substance was modeled after a Rabbi's genetic structure or one of the Unclean. Since any of those versions are natural to the body, after they are tagged as antigens then any insulin or squalene that is produced by your own body would then be targeted as an antigen. THAT is called a CAPTIVE MARKET.

Now, why do I say 500 mg limit when all of the health gurus tell you that you should be taking megadoses?

Here's where you pull out your checkbooks and start writing "gift" in the memo line and send it to me:

Patrick Jordan  
PO Box 731  
Champaign, IL 61824-0731

NOBODY tells you that if you take over 500 mg of Vitamin C per day it UPREGULATES your NEED for Vitamin C. In other words: it resets the threshold of your daily requirement. If you take 2000 mg of Vitamin C per day for months your body says: I guess I NEED 2000 mg per day! If you happen to fall below that amount for any reason – you forget, don't think you need it, run out of money...you can develop the symptoms of SCURVY. And you thought that was just the flesh-rotting disease that Captain Cook and his crew got when they were playing Salty Dog too long on the Boundless. If you want to know the secret of how to recover from upregulating your Vitamin C to a level that serves ONLY to line the pockets of Alternative Medicine and their supplement sales, then write me another check with "gift" in the memo line and I will give you the simple solution. You see, this is just like the Rothschilds (Bauers) funding both sides of all wars. Alternative Medicine is in on the game. They know that if they get you hooked on megadoses of vitamins then you will be their cash cow that the Allopaths 'lost'. Both sides against the middle. Pretty sick and treasonous if you ask me.

Sorbitol production can be interfered with by Vitamin C, but it is not a cure-all. The Sorbitol that has ALREADY BUILT UP IN YOUR CELLS WILL REMAIN THERE! Apparently you cannot get it out once it is there, but you can prevent the new from building up. This seems to be important as a hedge or investment against the future. If you KNEW about the use of Vitamin C when you first got diabetes and were using it then you would have more quality and longer life than if this knowledge was purposely withheld from you.

Now, I came across this info by casual reading 9 years ago. You KNOW that your doctor could have stumbled over it easier than I could because Diabetes is his or her damned SPECIALTY! Start asking the hard questions of why your doctor – who has to have continuing medical education credits! – has not counseled you on the benefits of the use of Vitamin C to stem the tide on the thing that actually KILLS people with diabetes.

But not to worry folks! I just heard that they are going to GENETICALLY ENGINEER CASAVA!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

YAHOO! As in EA-HU the great destroyer of worlds.

Cassava is the LAST HOLDOUT for those of us with allergies to Vitamin C that is made from CORN!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

CORN!!!!!!!!!!!!!!!!!!!!!! YES. CORN!!!!!!!!!!!!!!!!!!!!!! and other allergens that are the starter material for vitamin C. It can be made from bacterial fermentation, peppers, citrus or cassava. The EXCUSE is that cassava is relied on by so many backwards cultures as their only source of food that the ILU AMON ATYS in their loving wisdom must swoop down and wave their magick wand of genetic manipulation to make it BETTER for them.

This is what Monsanto did with the soybean. Since vegetarians don't eat meat and the Princes of the Moon and Sun have vaccinated and poisoned the snot out of the meat supply, they had to get at the vegetarians somehow so they made it so that no soybean is free from GMO contamination. So now, cassava and pure Vitamin C will be under their control too.

---

Here's how to toggle the molecular diabetes switch like something out of the Biology of Aggression.

Title:	<b>Effect of vitamin C on sorbitol in the lens of guinea-pigs made diabetic with streptozotocin.</b>
Author:	Bates, C J : Cowen, T D : Evans, P H
Citation:	Br-J-Nutr. 1992 May; 67(3): 445-56
Abstract:	Marginally vitamin C-deficient guinea-pigs treated with the diabetogenic agent streptozotocin were compared with those liberally supplied with vitamin C, for functional indices of vitamin C status, particularly in the eye lens. Weanling male Dunkin-Hartley guinea-pigs were fed on diets with 0.1 g vitamin C/kg (marginally deficient), or 5 g/kg (liberally supplied), and some received intraperitoneal streptozotocin (two doses of 150 mg/kg body-weight). About half the streptozotocin-treated animals had high urinary glucose following an oral glucose dose; these animals also grew more slowly than the others. At 4 months after streptozotocin the animals were killed for measurement

of tissue vitamin C, glucose and sorbitol. Streptozotocin moderately increased the concentration of glucose in plasma, lens and aqueous humour. Lens sorbitol levels increased only in the group exposed to streptozotocin plus marginal vitamin C. There was a significant (P less than 0.02) positive correlation between urinary glucose and lens sorbitol levels overall. Liberal vitamin C intake may thus counteract the effect of streptozotocin diabetes on lens sorbitol, suggesting a new function of vitamin C, possibly related to cataractogenesis and to the biochemical lesions associated with diabetes.

#### LIST OF DRUGS TO PALLIATE WHAT CAN BE DONE WITH VITAMIN C.

Why would you mess with toxic drugs with side-effects when a simple over-the-counter vitamin will do? Oh, wait! Yeah... Codex. Can't have those stupid Slave Work Units undoing the damage we did with the vaccines by buying something simple over-the-counter without a prescription! Thank God for the genetic engineering of Cassava and Corn so now we can insure that those Vitamin C products have toxic proteins in them too! Bonus!

#### DODGING SIDE EFFECTS OF DIABETES

**"Vitamin C supplementation may provide a simple means of preventing and ameliorating the complications of diabetes without the use of drugs."** This comment was made by Joe A. Vinson, Ph.D. at a recent seminar on vitamin C at the New York Academy of Sciences. Dr. Vinson, as associate professor of chemistry at the University of Scranton in Pennsylvania, added that diabetics commonly present low plasma vitamin C levels, warning that the diabetic patient is at risk for developing "local scurvy."

He explained that low insulin uptake not only increases blood glucose levels, the levels of sorbitol (also a blood sugar) in the red blood cells are also increased, causing a sugar accumulation in the sensitive tissues of the eyes. **When Dr. Vinson gave eight diabetic patients 2,000 mg of vitamin C daily for three weeks, there was an average sorbitol decrease of 44.5 percent.**

The citation of megadosing does not imply that his test had a control for 500 mg per day so you won't know if that dose was equally as valid as the megadose. The only indication I have ever seen for megadosing vitamins was to get over a huge deficiency, but once that has been addressed the vitamins should be reduced or discontinued. Vitamins were never meant to be a daily necessity. Vaccine Induced Disease saw to that.

---

Talk about ILU AMON ATYS Opposite Day weirdness. Sorbitol is the thing that Vitamin C can combat in diabetes – but They use Sorbitol to feed BACTERIA to MAKE the Vitamin C.

<http://www.starch.dk/isi/glucose/sorbitol.asp>

Sorbitol is a sugar alcohol, C<sub>6</sub>H<sub>14</sub>O<sub>6</sub> found in nature as the sweet constituent of many berries and fruits – best known from *Sorbus aucuparia* (Rowan or European Rowan) from which it was isolated for the first time in 1872.

The Rowan Tree is sacred to Druids who happen to be the Witches that might have formed England, but Rowan was also supposed to be able to ward off Witchcraft. Go figure. There is a legend that if you touch a Witch with a branch from the Rowan Tree that the Devil will take her straight to Hell.

Mid 1950's, sorbitol large scale manufacture began due to new applications, such as humectant in cosmetology and sugar substitute in non cariogenic confectionery. Sorbitol is today commercially produced from starch by enzymatic hydrolysis and catalytic hydrogenation. It has wide applications as a sweetener and humectant.

Hmm. Cosmetics....If you read my book <http://www.cafepress.com/ICD999.412751584> then you would know what happens to things that are put ON your body. Once it is in the cosmetic it is IN you. Seems they are trying to get you permanently poisoned with Sorbitol if you have diabetes or not.

The manufacture of vitamin C consumes approximately 15% of world sorbitol production. *Gluconobacter oxydans* are used for the oxidative conversion of D-sorbitol to L-sorbose – an important intermediate in the manufacture of L-ascorbic acid (Vitamin C).

---

The bottom line is that you are under attack. You and your families are mortally wounded. There are treatments and dressings for the wounds but The Enemy has taken over as Chief Bandage Maker and they are putting disease into the bandages. Stop Codex, Stop the GMOs, Stop The Enemy because they are out to kill you with a slow and lingering death while making you pay them for the privilege.
