

What's Ailing America?
DISINFORMATION ABOUT COLLOIDAL SILVER

Rebecca Carley, MD

www.reversingvaccineinduceddiseases.com

In my opinion, colloidal silver is the most effective way to eradicate bacteria and viruses and one celled parasites that is available today. Not surprisingly, many disinformation minions on the internet and mainstream media are “warning” people not to use this very effective product, which will put Big Pharma’s antibiotic and antiviral divisions out of business (not to mention that the vaccine manufacturers will go out of business when people start using silver to protect themselves, instead of allowing themselves to be injected with bioweapon vaccines (which not only CAUSE the very infections they are alleged to protect us from, but also corrupt the immune system causing all autoimmune diseases, non-traumatic seizures, cancer and genetic damage, in people and in pets).

Here are just a few ways to use colloidal silver:

- Add to drinking water when traveling or camping.
- Burns sprayed with ionic silver heal rapidly without scarring.
- Safely sterilize anything from toothbrushes to surgical instruments.
- Use topically on cuts, wounds, abrasions, rashes, sunburn, razor nicks, bandages.
- Spray on garbage to prevent decay odors.
- Mist kitchen sponges, towels, cutting boards to eliminate E. Coli and salmonella bacteria to prevent food poisoning.
- Add when canning, preserving, bottling.
- Use like peroxide on acne.
- Add to juices to enhance shelf-life.
- Add to milk to delay spoiling, fermenting, deteriorating, or curdling.
- Spray in shoes, between toes, between legs to stop most skin itch, athlete's foot, fungi, jock itch.
- Diminish dandruff, psoriasis, skin rashes, etc.
- Add to bath water, gargle, douches, colon irrigation, nasal spray and dental water-pic solutions.
- Cuts downtime dramatically with colds, flu, pneumonia, staph, strep, respiratory infections and rhino viruses.
- Skin itch, eye and ear infections, some moles and warts vanish when colloid is sprayed on body after bathing.
- Use with Q-tip on fingernail, toenail, and ear fungi.
- Neutralize tooth decay and bad breath. Silver colloid stops halitosis by eliminating bacteria deep in throat and on back of tongue. Unlike pharmaceutical antibiotics, silver colloid never permits strain-resistant pathogens to evolve.
- Put a few drops on band-aids and bandages to shorten healing times.
- Health professionals might consider IV and IM injections. Tumor and polyp shrinking is reported when masses are injected directly (when colloid is added in correct proportions to sterile physiological saline or Ringer's Solution which contain sodium chloride).
- Toothaches, mouth sores, bacterial irritations are diminished.

- Soak dentures to reduce bacterial count and help prevent mouth infections.
- Spray refrigerator, freezer and food storage bin interiors.
- Stop mildew and wood rot.
- Mix in postage stamp, envelope, and tape moistening wells, paint and paste pots to prevent bacterial growth, odors, spoiling or souring.
- Add to water based paints, wallpaper paste, dishwasher, cleaning and mopping solutions, etc.
- Spray pet bedding and let dry.
- Spray on top of contents of opened jam, jelly, and condiment containers and inside lids before replacing.
- Mix in pet water, birdbaths, cut flower vases.
- Always add to swamp cooler water.
- Spray air conditioner filters after cleaning.
- Swab air ducts and vents to prevent breeding sites for germs.
- Use routinely in laundry final rinse water and always before packing away seasonal clothes.
- Damp clothes or towels and washcloths will not sour or mildew.
- Eliminate unwanted microorganisms in planter soils and hydroponics systems.
- Spray plant foliage to stop fungi, molds, rot, and most plant diseases.
- Treat pools, fountains, humidifiers, Jacuzzis, hot tubs, baths, dishwashers, re-circulating cooling tower water, gymnasium foot dips, and bath and shower mats.
- Spray inside shoes, watch bands and gloves and under fingernails periodically.
- Treat shower stalls, tubs, fonts, animal watering troughs, shavers to avoid trading germs.
- Rinse fruit and vegetables before storing or using.
- Put in cooking water.
- Human and animal shampoos become disinfectants.
- Prevent carpets, drapes, wallpaper from mildewing.
- Wipe telephone mouthpieces, pipe stems, headphones, hearing aids, eyeglass frames, hairbrushes, combs, loofas.
- Excellent for diapers and diaper rash.
- Spray toilet seats, bowls, tile floors, sinks, urinals, doorknobs to disinfect.
- Kill persistent odors by spraying area.
- Rinse pillowcases, sheets, towels and bedclothes.

There are literally thousands of other essential uses for this ridiculously inexpensive, odorless, tasteless, colorless, totally benign and easily produced powerful non-toxic disinfectant and healing agent. You'll find that a spray or misting bottle of silver solution may be the most useful health enhancement tool in your environment.

I have personally been using silver for about 16 years for myself and all my pets. I have suggested it to thousands of my clients over the years, and they have recommended it to thousands of others. The testimonials I have received over the years are truly amazing. **NOT ONE SIDE EFFECT HAS EVER BEEN REPORTED BY ANYONE.** With the mad scientists at the over 1,300 biowarfare labs in the US alone weaponizing various organisms, silver is your best defense. The visual documentation of silver's healing capabilities are most obvious in burns and wounds, which are healed with **NO SCARS** when silver is sprayed on damaged skin liberally throughout the day. In fact, one of my dogs who likes to bury his treats in the backyard abraded all of the skin off his nose 3 days ago when he got too rambunctious. I have been spraying his nose multiple times a day, and the black pigment on his nose has almost been completely replaced with healthy tissue.

I did a show on 9/7/13 about disinformation re: silver, but the archive hasn't been posted yet...when it is, it should be available at

https://www.youtube.com/user/freerevolutionradio/videos?sort=dd&view=0&shelf_index=0 . In my opinion, everyone should purchase their own

silver generator, so they can make silver for pennies a day. The EPA has labeled silver a PESTICIDE, so it is just a matter of time before it is taken off the market at health food stores. The silver generator I use is made by the Silver Lungs company; you can check it out at <http://shop.silverlungs.com/?Click=12254> .

On this show, I covered the **2 types of silver solutions (ionic vs colloidal):**

IONIC SILVER

The silver ion (Ag^+) will not be found free-roaming (as an ion) in the body because as soon as it gets into the body it combines with chloride (Cl^-) in sodium chloride, (NaCl) in the blood or hydrochloric acid (HCl) in the stomach to form (AgCl) or silver chloride. This is a far less potent form of silver versus a pure metallic nano particle of silver metal. The only ions that can exist as such in the body are those for which there are ion channels in cell membranes, such as K^+ (potassium), Na^+ (sodium), and Ca^{++} (calcium). Therefore, **ionic silver is best for TOPICAL use on skin wounds, decubitus ulcers, burns, in ears, and in the nose** where chloride is minimal to non-existent. Ionic silver appears clear. Parts per million (PPM) of silver in these solutions are accurately measured with a water test meter (conductivity or TDS).

COLLOIDAL SILVER

Pure silver metal particles in the nano range are the best form to swallow or breathe, as they can't form AgCl nor any other compounds of silver in the stomach or the lungs. True colloidal silver is made by taking ionic silver and combining it with a reducing agent which breaks down in water and releases thousands of free electrons that combine with the ions of silver. By providing a free electron for a silver ion, the silver ion will be "reduced" back into a complete atom of silver and thus converts the ions to atoms and then ultimately particles (i.e. a colloid.) "Plasma absorption resonance" causes these true colloidal solutions to appear yellow once they are converted from ionic to colloidal. This is how you will know that you have true colloidal silver due to the shift in color from clear to yellow. When these colloidal solutions are measured with a water test meter, the true PPM will not be detected any longer as these meters only give the PPM concentration of ions. This is because particles cannot be detected/measured with a water test meter, only ions. This explains why you should check the PPM of the solution you make with a test meter before you add the reducing agent.

Oxygen molecules can also combine with silver ions and form silver oxide, which then break down over time. Silver oxide particles are not considered to be colloidal as these are compounds of silver containing oxygen. Silver oxide (upon entry into the blood and/or stomach) will be quickly converted to (AgCl) silver chloride due to a more favorable reaction with chloride in those environments. This is why it is important to have a closed system (absent of a bubbling mechanism) which will greatly limit any oxygen from being introduced into the solution during production. The only other way to make particles of silver (better defined as large chunks) during electrolysis is if you have too much voltage and this will break large agglomerates of silver off of the electrodes in a process called "undercutting". This is entirely eliminated in the

Silver Lungs generator which only produces a controlled release of 0.23 nanometer silver ions (which can be optionally converted to true colloidal metal particles later if pursuing a true colloidal silver for oral administration.) In summary, ionic silver solutions are far better for topical/external administration types, whereas pure metal particles of silver are better suited for the stomach where they will be exposed to an acidic chloride environment. Particles of silver are the only form that survive a chloride-rich environment, and this is why yellow colloidal solutions are the type of choice for oral administration.

SCARE TACTIC CLAIMS OF "SILVER TOXICITY"

When toxicity studies are done, the studies are performed *in vitro* (i.e., in a lab petri dish), rather than real-world studies in the body. This does not provide real-world data for silver's activity (inside) the body. **There has NEVER been a single death proven from silver (unlike the myriad of deaths from ALL of Big Pharma's drugs).**

In the 1920's, silver was FDA approved as an antibiotic. Some people (chemists) were experimenting and combining it with nitric acid to form (AgNO₃) silver nitrate, which caused some people to get a slight grayish discoloring of their skin (called Argyria). It is important to note that even in the impractical dosages that were used which caused this, there were never any health effects. This is a chemical compound of silver involving nitric acid (i.e. apples and oranges.) This was simply the case of failed experimentation of creating silver compounds which have nothing to do with pure silver solutions produced properly today. Big Pharma used this as an excuse to run to the FDA to get silver red flagged and hopefully removed as it was a direct threat to the patented, side-effect riddled prescription medications that were produced and pushed into the medical system at that time. Silver is a considerable threat to Big Pharma as it cannot be patented, it has incredible efficacy and absolutely no health side-effects whatsoever in its pure form. In essence, they cannot control it.

As a dramatic tactic to scare people into not using silver solutions a few years ago, a man by the name of Paul Karason ("the BLUE man") made the rounds on national TV (including the Oprah show), apparently sponsored by Merck pharmaceutical company. Karason claimed his bright blue skin was a result of ingesting colloidal silver. However, on closer examination it turns out that he was drinking gallons of extremely high concentrations of experimentally produced home-brewed colloidal silver per week and was not using distilled water to make it! He was adding table salt as a catalyst to speed the process which created a completely different form of silver called silver chloride. Quite simply, the silver ions were combining with the table salt in the water to form a chemical compound of silver. It was even reported that Paul was using tap water (which contains copper) and this is another sign that Paul's skin discoloration was possibly due to excess copper bound to the silver through metallic bonding. Despite the bright blue color of his skin, he suffered no ill health effects nor any organ damage. I am convinced he was probably paid to do this to himself so he could do his "tel-LIE-vision" appearances to scare people away from silver.

Silver has been used as an anti-bacterial/anti-viral agent for thousands of years without a single death ever reported. In fact, no pathogen has ever been found which is not destroyed by silver and without any creation of resistant organisms (which occur with antibiotic use).

IONIC SILVER PROVEN TO PROMOTE HEALING OF TISSUES

Robert O. Becker, MD (author of the books "The Body Electric" and "Cross Currents; the Perils of Electropollution and the Promise of Electromedicine") is a pioneering researcher and leading expert in the field of biological electricity and regeneration. Twice nominated for the Nobel Prize, he is an orthopedic surgeon and full professor at the State University of New York, Upstate Medical Center in Syracuse, as well as Louisiana State University Medical Center in Shreveport.

Dr. Becker conducted extensive research at SUNY Upstate Medical Center in Syracuse, NY for many years, and concluded that silver works on the full spectrum of pathogens without any side effects or damage to the body, and that it also causes major growth stimulation of injured tissues due to the conduction of electricity by ionic silver (thus allowing normal tissue instead of scar tissue to form). I have seen this personally in my own experience with a very serious infected wound, and in clients with burns.

FDA (FRAUDULENT DRUG ADMINISTRATION) CONSPIRES WITH ITS HANDLERS IN BIG PHARMA TO KEEP THIS LIFE SAVING INFORMATION ABOUT SILVER FROM THE PUBLIC

Since the FDA could not find sufficient grounds to ban colloidal silver when pressured to do so by Big Pharma due to its long history of safety & effectiveness, the agenda changed to limiting access of information about it to the public. Thus, the FDA passed a "final ruling" in 1999 that places severe restrictions on claims that can be made re: colloidal silver. It can only be sold in the US as a "mineral supplement". No claims in advertising or on the label can be made regarding its effectiveness as an antibacterial or antiviral; if such occurs, the FDA can shut down the company and confiscate its inventory. Yet, toxic drugs which are killing & maiming people are "approved" by the FDA and are the only treatments covered by insurance; the only treatments taught in Big Pharma controlled medical schools to doctors who lose their license to practice medicine should they step out of the box and learn how to actually heal people. Since patients themselves continue to spend billions of dollars out of pocket every year to purchase natural therapies, the latest ploy was to create "America's doctor"; the wizard of Oz, who discusses a few natural herbs and supplements (which he obviously didn't learn about in medical school) to hook in daytime TV viewers, while at the same time promoting vaccines (in which he owns stock), electroshock therapy, the toxic poison aspartame, microwave ovens, toxic sunscreens (which cause skin cancer), buying the cheapest supplements, etc. (A "psyop" of the highest order.) He did recently mention silver on one of his shows with Gwenth Paltrow, but only in regard to spraying it into the mouth in the case of a sore throat.

It is not just the FDA going after silver; the EPA has joined in as well. The Samsung company manufactured a washing machine that released silver into the rinse cycle (to prevent the moldy smell of clothes not removed in a timely fashion). Obviously the reason the EPA took it off the market was to hide the education of the benefits of silver from the mass public.

Even more ridiculous, the company Logitech was fined \$400,000 because they impregnated the top cover of a computer mouse with silver and marketed it as antimicrobial, but failed to consult the EPA and register it as a PESTICIDE device!

<http://www.beyondpesticides.org/dailynewsblog/?p=2587>

The FDA & EPA are just 2 of the alphabet agencies we pay taxes to support; yet they do the opposite of the reason they were created (i.e., to protect the public).

In closing, I found it hilarious that combining silver with antibiotics is now being promoted (http://blogs.discovermagazine.com/d-brief/2013/06/21/effective-antibiotics-have-a-silver-lining-literally/#.Ui9CN3_hfCY). Rather than admitting that silver should be REPLACING antibiotics, they are combining the 2 to get rid of superbugs!

So if anyone tries to dissuade you from checking out the healing benefits of silver, they are (in my opinion) a disinformant. Disinformants in general give 90% truth and 10% lies, so you must question ALL information. ALWAYS CHECK THINGS OUT FOR YOURSELF!

If you need help in reversing your disease with natural therapies, please go to <http://www.reversingvaccineinduceddiseases.com/services> to learn how Dr. Carley does consults. (Note that Alzheimers can also be reversed as long as there is family available to give the person their remedies). You can access many archives of internet shows Dr. Carley has done over the last few years at <http://thelightofdayradioshow.com/archives/RBN-BACKUP/commercialFree.html> .. Dr. Carley's "What's Ailing America?" can now be heard on www.freedomslips.com, studio B, every Saturday from 6-8 PM EST.
